

Navya Kola

navya.kola1993@gmail.com, (513) 592-1802

EXECUTIVE SUMMARY

- Accomplished Senior Robotic Process Automation(RPA) Consultant certified as **Blueprism Accredited Solution Designer (ASD01)**, **Blueprism Accredited Developer (AD01)**, **UI Path Advanced RPA Developer** and with extensive skills in Robotic Process Automation (RPA), Data Analytics, Agile Development, Test Automation and Project management having more than 9 years of professional experience backed with an outstanding academic background as well as with certification in insurance domain, **AINS21 (Associate in General Insurance)**.
- Areas of interest include Robotic Process Automation, Intelligent Automation, Software Application Development, Artificial Intelligence, Machine Learning, Data Analytics, Databases, Test Automation.
- Strong Expertise in end-to-end project life-cycle development right from requirement gathering, requirement analysis, defining scope, design, preparation of high-level and low-level design documents (HLD & LLD), unit test plans, integration test plans, deployment, and production support.

EDUCATION

Master of Engineering, Computer Science

University of Cincinnati, College of Engineering and Applied Sciences, Cincinnati, OH

GPA: 3.58/4.0

December 2018

Bachelor of Technology, Electrical and Electronics

Jawaharlal Nehru Technological University, Visakhapatnam, India

GPA: 3.30/4.0

May 2014

COURSEWORK

- Machine Learning, Intelligent Data Analytics, Artificial Intelligence, Probabilistic Models, Advanced Algorithms, Innovation and Design Thinking, Data Base Theory, Software Quality Assurance.

ACADEMIC PROJECTS

- Document Image Analysis, Predicting Blood Donations, DengAI- Predicting Disease Spread projects.
- Extensively used Classification algorithms and Prediction models concepts of Machine learning in developing character recognition systems and predictive analysis of blood donation, anticipation of dengue in every country.
- Proficient in applying data visualization techniques for analyzing the shape of the data and consequently performing the data cleaning and identification of effective features in the data set.

PROFESSIONAL EXPERIENCE

Memorial Sloan Kettering Cancer Center

Software Engineer II

July 2020 –Till Date

- Effectively collaborating with cross-functional teams including Patient Accounts, Billing, Revenue Management, and Payroll to gather comprehensive requirements for critical use cases such as Claim Denial Processing, Charge Corrections, Invoice Processing, and payroll tasks. Leveraging this input to design and develop sophisticated robotic process automation (RPA) solutions that significantly enhanced operational efficiency, reducing manual efforts and accelerating workflows for stakeholders.
- Delivered impactful demonstrations on advanced technologies, highlighting the integration of Machine Learning and Artificial Intelligence with RPA to showcase how cutting-edge innovations can be applied to streamline business processes, improving accuracy, and driving greater operational efficiencies.
- Proactively mentored and guided summer interns over a span of four consecutive years, actively contributing to the Digits Summer Internship program by playing a key role in recruitment and operational management.
- Diligently managing comprehensive production support for RPA bots running in a live environment. This included overseeing the management and monitoring of bots within UiPath Orchestrator, with responsibilities covering Work Queues, Orchestrator Jobs, Triggers, and Logs. Ensured that all bots performed optimally, addressing issues promptly and ensuring continuous, smooth operation.

- Successfully led the development of complex automation solution by working in close collaboration with internal teams, stakeholders, and external vendors. The automation spanned multiple applications and datapoints, creating seamless handoffs to business users while extracting critical data from images for claim denials received through diverse channels. This automation effort helped save millions of dollars in write-offs and facilitated faster recoupment of accounts receivable compared to manual processes, delivering high-impact financial returns for the organization.
- Strategically prioritized tasks and spearheaded knowledge transfer sessions to upskill team members, driving forward strategic initiatives in intelligent automation and optimization. These efforts fostered a culture of continuous improvement, enabling the team to achieve higher standards of performance in automation development.
- Effectively contributed to the development of standardized bot templates, improving efficiency, robustness, and scalability of future automation solutions. Proactively optimized existing business processes by reengineering workflows in close partnership with business teams, implementing automation in accordance with Agile methodologies to ensure high adaptability and stability in operational workflows. Enhanced existing automation workflows by implementing best practices in reusable libraries and designing robust exception handling mechanisms using UiPath's RPA toolset, thereby ensuring greater efficiency and resilience in the bots.

GowraTech LLC (Client Centene Corporation)

Senior Application Software Engineer (Process Automation)

February 2020 –July 2020

- For an insurance corporation which operates as multi-line managed care organization that provides Medicaid and Medicaid-related programs. The company offers health plans in several states and it provides specialty services including behavioral health, nurse triage, and treatment compliance.
- Being a part of Centre of excellence team, working closely with other developers, product owners and product support engineers to deliver new automated processes to replace manual claim processing of insurance policies of multiple states using Openspan version 8.0 in Agile working model.
- Creating scalable and efficient process automations using Pega Robotics tool and C# programming language by working with product owners in identifying and designing appropriate automation workflows.
- Efficiently working closely with multiple robotic process automation teams simultaneously to understand the business use cases and their significance for supporting the automated use cases in future.
- Underwent the complete training on Pega Robotics System Architect Essentials provided by Pega academy.
- Actively working on setting up a new automation project using Pegasystems by being involved in process overview discussions with business team and working with different applications team involved in the process for setting up the applications in automation development environment. Analyzed the use cases identified for robotic process automation using UiPath tool.

Wonderbotz, LLP

Senior RPA Consultant (Robotic Process Automation)

September 2018 – February 2020

- For a US Fintech firm, worked as the primary onsite consultant on a strategic global automation program with scope spanning across multiple finance & accounting and operations value-chain, including P2P, R2R and OtC – powered by Blue Prism as RPA platform and ABBYY as intelligent document platform. Designed the automation solution of their invoicing processes powered using Blue prism and assisted in building multiple objects and processes by leveraging existing company frameworks and developing new ones. This program effort included a full project life cycle starting with define, design, develop, test and deploy with needed project documentation viz. PDD, SDD, ODI, PDI, deployment & operations handbook. Also, led RPA operational support in production, including automation stabilization & enhancements.
- Supported the automation of data capture, data validation and invoice data entry to multiple online invoicing portals such as Coupa and Oracle database. Led the development of dynamic, reusable data cleansing utility for validating the raw invoice data and cleaning it as per the business rules driven through the external client configuration excel files. Successfully led the team in integrating Natural Language Processing capabilities into the automation using ABBYY for extracting data from pdf invoices and converting unstructured data to structured

format. Supported in developing an interface between ABBYY and Blue Prism, which worked without any human intervention. Assisted client in configuring multi bot environment for executing the invoice process automation in such a way that around 5000 transactions processed per month with each transaction executed in 5 minutes.

- Extensively worked on the creation of a customer facing product that accepts requests from users. The process interrogates the robot's inbox and retrieve emails of the proper format. It then parses the email into instructions for fetching the appropriate document(s) and issues a reply email to the sender with the requested files attached. If the maximum size for email is exceeded than a threshold value, the files are placed in the cloud and a link to their location is included instead.

Notable accomplishment: Instituted design-thinking in the overall process automation, including a modular approach to handling of different formats of emails. Developed reusable workflows which extracted, validated and cleansed information from emails, web portals, PDF attachments, and Excel files.

- For a Global Media and Entertainment Company, provided RPA and IPA assessments and strategy development through data collection and client interviews to recommend the optimal RPA platform(s) based on client needs and scope. Worked with a team of consultants and client employees to automate the processes which relied on SAP ERP and multiple other homegrown and third-party applications. Communicated with client employees in multiple locations to understand process requirements. Solution was developed using Blue Prism. Effectively explained design of solution to client and demonstrated developed solution to client. Undertook a week-long training class to teach client employees development using Blue Prism.

Notable accomplishment: Externalized parameters needed to run the process into a single Excel file. Future changes can easily be made just by changing values in the one file. Developed reusable objects which interacted with SAP which could be utilized in multiple processes.

- Extensively worked on Solution design and implementation of Financial business processes which involves SAP, Java, Web and Windows applications using Blueprism, UIPath, Automation Anywhere RPA tools and ABBYY.
- Excellent in designing and implementing dynamic and parameter driven reliable and robust RPA frameworks. Assisted in POCs and developing internal RPA tools to automate common processes in applications such as Excel, Word, Adobe Acrobat, E-mail using Blueprism, UIPath and Automation Anywhere which would be used in future client implementations to achieve results.
- Postproduction, supporting the client with change requests and fixing the bugs in production. Extensively worked on using Excel VBO with Blue Prism. Experience in using MAPlex/Outlook VBO to Email reports and errors. Excellent in both of Solution Design and Process Design documentation (SDD & PDD) by working with Subject matter experts, unit & functional test plans. Proficient with MS Office with exceptional skills in advanced MS Excel calculations & logic and developing Macros.

Vertex Pharmaceuticals Incorporated

Intern (Robotic Process Automation)

May 2018 – August 2018

- Served as an RPA Automation Architect in reviewing process automation candidates – process analysis and feasibility assessment, setting up infrastructure, providing high level directional inputs on scalability, reusability, leading practices in RPA space, etc., and executing Proof of Concept automations using Blue prism.
- Worked through the entire process automation life cycle – starting with define, design, develop, test and deploy with needed project documentation viz. PDD, SDD, ODI, PDI, deployment & operations handbook.

University of Cincinnati Dept. of Info. Technology

Data Analyst

January 2018- April 2018

- Successfully designed the data structure and migrated the library of congress meta data using SSDT tools by creating SSIS package. Excellently contributed to the development of prototype of research directories with advanced search abilities for presentation in CNI (Coalition for Networked Information) by UC.

Application Developer (.Net Framework)

November 2017- December 2017

- Meritoriously supported the web application development for Preceptor Application using .Net Framework.

Tata Consultancy Services

Application Developer (Robotic Process Automation) (Banking & Finance Client)

July 2014 – July 2017

- Meticulously worked on feasibility analysis, process automation and developed software robots for business process, Payments Investigation of banking modules to analyze and settle the Customer tickets/issues using blue prism tool.
- Interacted with the clients to understand their business requirements and understanding the business flow through status calls. Worked on end-to-end testing, troubleshooting, test execution for BOTs and programmed automation. Experience with Control room, Process Studio, Object Studio, Workflow and multi-BOT architecture.
- Effectively worked on Queue Configurations, Monitoring, Internal Blue Prism Work Queue Actions, Exception handling, efficient use of stages, blocks, data types, session, and environmental variables for processing of Business Process diagrams and Process flow charts using Blue Prism. Created and documented test procedures and scenarios for the pre-UAT phases and supported operational teams during the UAT and roll-out phases.

Automation Test Consultant (QA) (SWBC and Grange Insurance)

October 2014 – July 2015

- Proficient in Designing, developing, and executing manual and/or automated test cases using functional specifications. Remarkably worked on automation feasibility checking, building automation frameworks and scripts in VBScript, Java, Ruby for test execution using QTP, Selenium, and Cucumber respectively in Page object model, Hybrid framework and Action driven framework using Agile methodology. Productively handled scrum calls, several projects simultaneously and played an active role in sprint planning, reviewed test cases, educated team members on test automation techniques.

QA Analyst (Global Trade Repository (GTR))

July 2014 – September 2014

- Competently performed database testing for DTCC (Depository Trust Clearing Corporation) by developing and executing SQL queries to retrieve trades (records in the database of GTR) from Oracle database.
- Worked on requirement analysis, documented functional requirements, test scenarios and test cases. Performed test case execution and supported in resolving bugs in the product by collaborating with developers and the business team.

TECHNICAL SKILLS

- **Languages:** Python, SQL, C#, Java/J2EE, ASP.Net, Ruby, C, VBA
- **Technologies:** HTML5, Java Script, CSS, Shell Scripting, VB script
- **Development Tools:** Blue Prism (RPA), UIPath, Automation Anywhere, Openspan 8.0, TOAD, Anaconda, Tableau, SSDT, ABBY
- **Automation Testing:** Selenium, QTP (Quick Test Professional), Cucumber
- **Project Management Tools:** ALM, TFS, Github, SVN, JIRA, Visual Studio, Share Point, IBM Clear Quest
- **Databases:** MySQL, Oracle, Greenplum, MongoDB, Neo4j
- **OS:** Windows, Linux (Ubuntu, Fedora), Mac
- **Certifications:** Blueprism Accredited Solution Designer (ASD01), Blueprism Accredited Developer (AD01), UI Path Advanced RPA Developer, AINS21(Associate in General Insurance – Property and Liability Insurance Principles), C # Essential Training, JavaScript Essential Training, Python for Data Science Essential Training, Tableau 10 essential training, Introduction to Data Science.

AWARDS AND ACHIEVEMENTS

- Achieved **STAR OF THE MONTH** Award for successfully completing a complex project on time in TCS.
- Achieved **ON THE SPOT** award for impressive learning skills and adaptability to new technology in TCS.
- Selected for pursuing education fellowship in data science course provided by Data Incubator company.
